

Official PENNDOT ASM Cutpoint Analyzer Bulletin - May 2003.

Please be advised that a recent court ruling requires the Department of Transportation (through the manufacturer of your equipment) to implement revised final cutpoints for all vehicles subject to an ASM emissions inspection by September 1, 2003. The manufacturer of your equipment is currently developing the software changes to accommodate the new cutpoints. Please be aware that there will be a payment required, payable to your equipment manufacturer, for the purchase and installation of this software. You will be contacted at a later date with manufacturer specific information regarding pricing, ordering and the installation of the new software. To assure the timely upgrade to your analyzer and to meet the court ordered September 1, 2003 deadline, you must make arrangements with your equipment provider no later than July 15, 2003 to arrange for the upgrade.

This is a mandatory upgrade and those stations that fail to have the analyzer upgrade performed will be unable to participate in the emissions inspection program after September 1, 2003.

If you should have any questions, please contact the Station Operator Hot Line at (888) 265-5909 or Pete Gertz, PENNDOT, at (717) 787-2895.

Kurt J. Myers, Director

Bureau of Motor Vehicles
